

# What To Keep In Mind When Considering Your Showcase

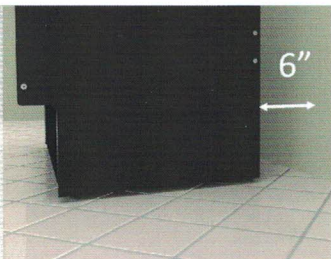

Showcases are designed to display your refrigerated products at 38-41°F (4-5°C). Showcases are designed to perform correctly when it is placed in environmental conditions of 75°F (23°C) and 55% relative humidity.

Your showcase will work at it's peak performance with regular cleaning maintenance. A maintenance manual is included with every display or can also visit our on-line maintenance video.

HVAC ceiling vents and ceiling fans will effect the airflow of open showcases and could create condensation on the glass of closed showcases

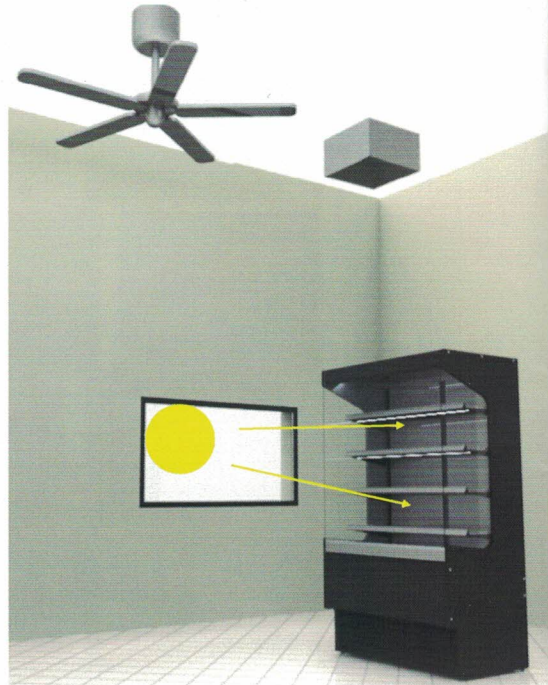

A 6" space is required behind the showcase that is against a wall or has a rear obstruction

Ensure that your showcase is plumb and level

A location near a doorway will affect the airflow and holding temperature of open and closed showcases

Direct sunlight will effect the holding temperature of open or closed showcases

The Arctica Showcase customer service team is available to assist you in helping you choose the right display and answer any questions you may have as you consider a showcase for your retail s
